Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

Claim 4; Page 29; 46pp; English.

The invention relates to novel immunogenic CpG oligodeoxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5.-NNT-CpG-WNN-3' or 5'-RY-CpG-RY -3'. The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide agent, and a pharmaceutical lomposition comprising the oligonucleotide mediated (T-cell) response or a humoral (B-cell, antibody) response, with oligonucleotides of the sequence 5'-RY-CpG-RY-3' being able to induce a

cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNNN-3'
being able to induce a humoral response. It is thought that after
administration, the oligomucleotide acts on antigen-presenting cells
(e.g., macrophages and dendritic cells), which then release cytokines,
leading to activation of natural killer (NK) cells. A cell-mediated or
humoral response can then occur by activation of T- or B-cells. The
induction of an immune response is useful for treating, preventing or
ameliorating an allergic reaction (preferably aschma), or an infection,
where an immunogenic CpG oligomucleotide is administered either alone or
it combination with an anti-allergenic agent or anti-infectious agent.
The allergic conditions which may be treated include eczema, allergic
rhinitis, hayfever, urticaria, food allergies and other atopic
conditions, and the infections which may be treated include viral,
bacterial, fungal and protozoal infections such as tuberculosis AIDS,
bacterial, fungal and protozoal infections such as tuberculosis AIDS,
conditions, and the infections which may be treated include viral,
bacterial, fungal and spotozoal infections such as tuberculosis AIDS,
conditions, and the infections with an auti-input sclerosis,
conditions, and the infections with an auti-cancer
associated with immune system deficiency, and symptoms resulting from
exposure to an agent of bloggical warfare. An immunogenic CpG
oligonucleotide, either alone or in combination with an anti-cancer
agent, is useful for treating solid tumour cancer. The induction of an
immune response is used in antisense therapy and to improve the efficacy
continued to an expense of the preferably administered to
the immune and antisers preferably administered to lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CpG oligodeoxynucleotide of the invention

```
The invention relates to novel immunogenic CpG oligodeoxymucleotides (AAC80581-C80723). The oligomucleotide are at least 10 bases long and comprise one of the generic sequences? *\text{NNN-205-WNNN-3} or 5.\text{RY-CpG-RY-C3}. The central CpG motif is unmerthylated, and the oligomucleotides or comprise one of the generic sequences $\text{NNN-105-WNNN-3} or 5.\text{RY-CpG-RY-C3}. The central CpG motif is unmerthylated, and chosen them more resistant to degradation. The invention also relates to an oligomucleotide delivery complex compressing an oligomucleotide of the invention and a targetting again, and a pharmacentical composition comprising the oligomucleotide delivery complex. The oligomucleotides are able to induce a cell-mediated response or a humoral (B-cell, antibody) response, with oligomucleotides and those of the sequence 5'-RY-CpG-RY-3' being able to induce a humoral response. It is thought that after cell-mediated response, and those of the sequence 5'-RY-CpG-RYNN-3' being able to induce a humoral response. It is thought that after cadministration, the oligomucleotide acts on antigen-presenting colls of leading to activation of natural killer (NK) cells. A cell-mediated or humoral response can then occur by activation of T or B-cells. The induction of an immune response is useful for treating, preventing or amelioration which an anti-allergenic agent or antigeneric atopic of the combination which may be treated include eczema allergic conditions which may be treated include viral, beacterial, fungal and protozoal infections such a treated include eczema allergic conditions with manne assons induction may also be expensed in the treatment of an autoimmune disorder (e.g., lugus conditions of an agent of biological warfare, all
                                                                                                         Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CpG oligodeoxynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               numnne response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonucleotide is preferably administered to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Seguence 20 BP; 3 A; 3 C; 11 G; 3 T; 0 U; 0 Other;

Novel oligonuclectides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

Claim 4; Page 30; 46pp; English

The invention relates to novel immunogenic CpG oligodeoxymucleotides CAAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5.\*NNTM-CpG-MNN-3' or 5.\*RX-CpG-RXY -3'. The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide delivery complex the oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotide are able to induce either a cell-mediated response or a humoral [B-cell, antibody) response, with coligonucleotides of the sequence 5'-RY-CpG-RY-3' being able to induce a cell-mediated response, and those of the sequence 5'-RNT-CpG-WNNW-3' coligonucleotides of the sequence 5'-RY-CpG-RY-3' being able to induce a humoral response. It is thought that after a cell-mediated response, and dendritic cells), which then release cytokines, leading the oritivation of natural killer (NK) cells. A cell-mediated or numbination of natural killer (NK) cells. A cell-mediated or numbination with an anti-allergence and an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or antifections agent. The allergic conditions which may be treated include eczema, allergic rhinitis, hayfever, urticaria, food allergies and other atopic conditions, and the infections which may be treated include eczema, allergic rised may into may also be constitions, and the infections which may be treated include viral, beacterial, fungal and protozoal infections such a tuberculosis, and secure of a securing an adsorber of a securing and multiple sclerosis, a disease associated with immune system deficiency, and symptoms resulting from exponence to an agent of biological warfare. An immunogenic of pidonucleoride situation with an anti-former of pidonucleoride setue he response is used in antisense therapy and to improve the efficacy vaccine. The oligonucleotide is preferably administered to lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CpG oligodeoxynucleotide of the invention oligonuclectide, either alone or in combination with an anti-cancer agent, is useful for treating solid tumour cancer. The induction of an

WPI; 2001-442129/47.

Oligodeoxynucleotides for inducing an immune response to treat and prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG seguences

Claim 5; Page 34; 48pp; English.

AASO9551-AASO9662 represent oligodeoxymuclectides (ODN) of at least 10 nuclectides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences. The ODN are useful for inducing an immune response, preferably a cell-mediated immune response, professions interferon gamma (IRN-gamma) production or a humoral immune response involving B cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma,

system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is used in antisense therapy. The ODN are useful for treating, preventing or ameliorating allergic reactions, including eczema, allergic thinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines against hepatitis A, B and C, human immunodeficiency virus (HIV) and malaria, for treating immune system deficiencies, e.g. lupus erythematosus and autoimmune diseases such as rheumatoid arthitis and multiple sclerosis, infections including Franciscials, schistosomiasis, tuberculosis, acquired immunodeficiency syndrome (AIDS), Leishhania and symptoms resulting from exposure of bio-warfare agent, including Ebola, with the immune Anthrax and Listeria

```
The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be useful for enhancing an immune response treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                 New immunostimulatory compositions comprising RNA/DNA hybrid obligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA/RNA bybrid; phosphorothicate backbone; immunostimulatory; vaccine; infection; allergy; cancer; hypersensitivity; bic-warfare; immunostimulant, antiallergic; cytostatic; antimicrobial; anti-HIV; immunosuppressive; protozoacide; virucide; hepatotropic; gene therapy; antiinflammatory; antibacterial; ss.

The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytckines. It can be useful for enhancing an immune response or inducing cytckines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant treating diseases, including pathogenic infection, (non-)malignant colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                              oligomucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          infection; allergy; cancer; hypersensitivity; bio-warfare; immunostimulant; antallergic; cytostatic; antimicrobial; anti-HIV; immunosuppressive; protozoacide; virucide; hepatotropic; gene therapy; antiinflammatory; antibacerial; ss.

oligonucleotides, useful for enhancing an immune response or inducing cytokinnes, particularly for treating diseases, e.g. cancer, allergy or HIV infection.

Example 11; Page 61; 68pp; English.

The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant treating diseases, including pathogenic infection, (non-)malignant colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

i Sequence 7135, Application US/09252991A
i Patent No. 6551795
i GENERAL INFORMATION:
I TILLE OF INVENTION: NUCLEIC ACID AND AND AND ACID SEQUENCES RELATING TO PSEUDOMONAS
I TILLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
I TILLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
I TILLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT PLING DATE: 1999-02-18
I PRIOR PLILOM NUMBER: US 60/074,788
I PRIOR PLILOM NUMBER: US 60/074,788
I PRIOR PLILOM NUMBER: US 60/074,190
I PRIOR PLILOM NUMBER: US 60/094,190
I PRIOR FILING DATE: 1998-07-27
I NUMBER OF SEQ ID NOS: 33142
I LENGTH: 1584
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 7259, Application US/09252991A

Sequence 7259, Application US/09252991A

Patent No. 651795

GENERAL INPORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TITLE OF INVENTION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 1794

Sequence 13697, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION: BUCHEL AL

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING 7

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR PLLICATION NUMBER: US 60/074,788

PRIOR PLLING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 13697

LENGTH: 1194
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          යු
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1425/c
Sequence 1425, Application US/09252991A
Sequence 1425, Application US/09252991A
Sequence 1425, Application US/09252991A
Patent No. 6511795
GENERAL INPORMATION:
APPLICANT:
Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA POR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: 101196.136
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 1425
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1690, Application US/09252991A

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

Site 2: Not1: This BB17 cDNA library was generated by
subtraction of the BB16 library with 4000 previously
sequenced clones. The BB16 library was contributed by the
Scares laboratory and it was constructed and normalized
as described by Bonaldo, M.F., Lennon, G. and Soares,
M.B. (1996), Genome Research 6(9): 791-806. RNA was
prepared from dissected brains of adult worker bees of
various ages and various behavioral groups.

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

Claim 4; Page 30; 46pp; English.

The invention relates to novel immunogenic CpG oligodeoxynucleotides

```
Comprise one of the generic sequences 5.4NNY-CpG-WNNN-3 or 5.4XY-CpG-RY
comprise one of the generic sequences 5.4NNY-CpG-WNNN-3 or 5.4XY-CpG-RY
comprise one of the generic sequences 5.4NNY-CpG-WNNN-3 or 5.4XY-CpG-RY
complex comprising an oligonucleotide of the invention and a targetting
complex comprising an oligonucleotide of the invention and a targetting
complex comprising an oligonucleotide of the invention and a targetting
complex comprising an oligonucleotide of the invention and a targetting
complex complex. The oligonucleotide of the invention and a targetting
coligonucleotides of the sequence 5.4XY-CpG-RY-3
coligonucleotides a humoral response. It is thought that after
definistration, the oligonucleotide acts on antigon-presenting calls
coligonucleotide and dendriatic cells), which then release cytokines,
leading to activation of natural killer (MK) cells. A cell-mediated or
lunoral response can then occur by activation of T or B-cells. The
andiotration an allergic reaction (preferably asthma), or an infection,
where an immunogenic CpG oligonucleotide is administered either alone or
conditions, and the infections which may be treated include eczema, allergic
conditions, and the infections which may be treated include eczema,
conditions, and the infections which may be treated include eczema,

prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG response to treat and Oligodeoxynucleotides for inducing an immune sednences

Claim 5; Page 34; 48pp; English.

nucleotides comprising multiple CGS sequences, where one of the CGS sequences is different from another of the multiple CGS sequences. The comparison multiple CGS sequences, where one of the CGS sequences is different from another of the multiple CGS sequences. The CGS ob are useful for inducing an immune response, preferably a cell-cativation, interferon cancer in the conformal immune response involving B CG cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma. CC cancer, e.g. solid tumour cancer, a disease associated with the immune cystem deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is cused in antisense therapy. The CDN are useful for treating, preventing or ameliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, for improving the efficacy of vaccines can other atopic conditions, including Prancisella, schiztosomiasis, there were the control of the control (ODN) of at least 10 AAS09551-AAS09662 represent oligodecxynucleotides Anthrax and Listeria

The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumnours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic thinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunosimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New immunostimulatory compositions comprising RNA/DNA hybrid oligonuclectides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA/RNA hybrid; phosphorothicate backbone; immunostimulatory; vaccine; infection; allergy; cancer; hypersensitivity; bio-warfare; immunostimulant; antiallergic; cytostatic; antimicrobial; anti-HIV; immunosuppressive; protozoacide; virucide; hepatotropic; gene therapy; antiinflammatory; antibacterial; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /*tag= a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            misc RNA
```

```
The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytchines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, preventing or malaria. The composition is also useful for treating, preventing or maliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Boola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                         New immunostimulatory compositions comprising RNA/DNA hybrid oligomucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA/RNA hybrid, phosphorothioate backbone, immunostimulatory, vaccine, infection; allergy; cancer; hypersemitivity; bio-warfare; immunostimulant; antiallergic; cytostatic; antimicrobial; anti-HIV; immunosuppressive; protozoacide; virucide; hepatotropic; gene therapy; antiinflammatory; antibacterial; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /*tag= a
/notes "optionally thymidine is replaced by uracil to
form RNA or DNA/RNA hybrids. Thymidine is linked to at
least one other base through a ribose sugar"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 20 BP; 2 A; 4 C; 12 G; 2 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and an NNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergic thinitis, hay fever or food allergiess), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       infection; allergy; cancer; hypersensitivity; bio-warfare; immunostimulant; antiallergic; cytostatic; antimicrobial; anti-HIV; immunosuppressive; protozoacide; virucide; hepatotropic; gene therapy; antiinflammatory; antibacterial; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              focus "optionally thymidine is replaced by uracil to form RNA or DNA/RNA hybrids. Thymidine is linked to at least one other base through a ribose sugar"
                                                                                                                                                                                                                                                                                                                                    New immunostimulatory compositions comprising RNA/DNA hybrid oligonuclectides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA/RNA hybrid; phosphorothicate backbone; immunostimulatory; vaccine;

                                                                                                                                                                                                                                                        The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant treating diseases, including pathogenic infection, (non-)malignant colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic thinitis, hay fever or food allergies), Lyne disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                        New immunostimulatory compositions comprising RNA/DNA hybrid oligonucleotides, useful for enhancing an immune response or inducing cytokines, particularly for treating diseases, e.g. cancer, allergy or

                                                                                                                    The invention describes a vaccine comprising one or more epitopes of a bramyxoviridae P protein, and one or more CpG (cytosine followed by guanine linked by phosphate bond) -oligodideoxynucleotides (ODNS). The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory syncytial virus (RSV), the primary cause of viral broncholitis and pneumonia in infants and children, and infectious pulmonary disease in infants. RSV has been barticularly implicated in death of infants that are premeture, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CpG oligodeoxynucleotide; dendritic cell; tumour; immunotherapy; vaccine; cytostatic; immunostimulant; gene therapy; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Generating mature dendritic cells for tumor immunotherapy or as vaccines for activating the immune system to treat diseases such as cancer, comprises contacting a dendritic cell precursor with a D type
Vaccine for immunizing patient against respiratory syncytial virus, has epitopes of Paramyxoviridae F protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxymucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The present sequence is that of a CpG oligodeoxynucleotide of the invention. A claimed method for generating dendritic cells involves contacting a dendritic cell precursor, especially a monocyte, with a D type oligodeoxynucleotide (see ACC48294) containing a central unmethylated CpG motif. The method is useful for generating mature dendritic cells and enhancing T cell responses, thus enhancing antigen presentation. Mature dendritic cells are useful for tumour immunotherapy, for augmenting an immune response to an infectious agent or to a vaccine, and as vaccines to prevent future infection or to activate the immune.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          dendritic cell; tumour; immunotherapy; vaccine;

The invention relates to sterically stabilised cationic liposomes (SSCL) which comprises a cationic lipid, a co-lipid, stabilising agent and encapsulating a K type oligodeoxynucleotide (ODN) including a CpG motif. The invention is useful in pharmaceutical composition for impairing growth of a solid tumour cell (e.g. human tumour cell) bearing an immune response, which is expression of a cytokine (e.g. interferon gamma), particularly immunotherapeutic response against tumours or stimulating an immune response against tumours or stimulating an invito or an in vitro immune cell, and for inducing an immune response against an in vitro immune cell, and for inducing an immune response against an infectious agent e.g. virus, bacteria and fungus. It is also useful for delivering oligodeoxynucleotides including a CpG motif in clinical applications; for treating infectious diseases (e.g. tularemia, malaria, francisella, schistosomiasis, tuberculosis and leishmaniasis, cancer etc), allergy (e.g. eczema, allergic rhinitis or coryza, hay fever, bronchial or allergic asthma, urticaria, food allergies), autoimmune condiseases (e.g. diabetes, rheumatoid arthritis, lupus erythematosus and multiple sclerosis) and psoriasis. The present sequence is a D class CpG CDN potentially useful for encapsulating in SSCL
                                                                                                                                                                                                                                                                                                                                                                                                                             oligodeoxynucleotide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cationic liposome composition for delivering oligodeoxynucleotides including a CpG motif in clinical applications, comprises a cationic lipid, a co-lipid, stabilizing agent and an encapsulated oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                  Sterically stabilised cationic liposome; SSCL, ODN; oligodeoxymucleotide tuberculosis; cytokine; leishmaniasis; AIDS-associated Kaposi's tumour; thyroid; cancer; allergy; eczema; allergic rhinitis; coryza; hay fever; schistosomiasis; interferon gamma; lupus erythematosus; antimicrobial; asthma; urticaria; autoimmune disease; diabetes; rheumatoid arthritis; CpG motif; interleukin-13; cytostatic; tularemia; malaria; psoriasis; multiple sclerosis; infection; tumour; ss.

The invention relates to sterically stabilised cationic liposomes (SSCL) which comprises a cationic lipid, a collipid, stabilising agent and encapsulating a K type oligodeoxymucleotie (ODN) including a CpG motif. The invention is useful in pharmaceutical composition for impairing an immune relation. The invention is useful in pharmaceutical composition for impairing an immune response, which is expression of a cytokine (e.g. interferon gamma), particularly immunotherapeutic response against tumours or stimulating an invito immune cell, and for inducing an immune response against an in vitro immune cell, and for inducing an immune response against an infectious agent e.g. virus, bacteria and fungus. It is also useful for delivering oligodeoxymucleotides including a CpG motif in clinical applications; for treating infectious diseases (e.g. tularemia, malaria, francisella, schistosomiasis, tuberculosis and leishmaniasis), cancer (e.g. solid tumours, AIDS-associated Kaposi's tumour, thyroid cancer etc), allergy (e.g. eczema, allergic rhinitis or coryza, hay fever,

The present invention describes a method for inducing the production of vascular endothelial growth factor (VBGP) by a cell comprising contacting the cell with a CpG oligonucleotide and therefore inducing the production of VBGP by the cell. Also described: (1) inducing neovascularisation in a tissue, comprising introducing a CpG oligonucleotide into an area of the tissue, comprising introducing a CpG oligonucleotide into an area of the tissue, and so inducing neovascularisation in the area of the tissue, (2) promoting angiogenesis in an area of the subject; where angiogenesis is desired, angiogenesis in an area of the subject; where angiogenesis and sea of the subject where angiogenesis in the subject; and (3) screening for an agent that inhibits neovascularisation, comprising angiogenesis in the subject; and (3) screening for an agent that inhibits neovascularisation, comprisation the past to the animal indicates that the mammal, where inhibition of angiogenesis in the animal indicates that the mammal, where inhibition of angiogenesis in the animal indicates that the agent is effective in inhibiting neovascularisation. The CpG oligonuclectides have vulnerary, vasotropic and antiarteriosclerotic activities, and can be used in inducing angiogenesis or cliganuclectides can be used in inducing angiogenesis or cliganuclectides can be used in inducing angiogenesis or subjects who have a wound or who have
                                                                                                                                                                                            ..
bronchial or allergic asthma, urticaria, food allergies), autoimmune diseases (e.g. diabetes, rheumatoid arthritis, lupus erythematosus and multiple sclerosis) and peoriasis. The present sequence is a D class ODN potentially useful for encapsulating in SSCL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Inducing the production of vascular endothelial growth factor by a cell, useful for inducing angiogenesis, comprises contacting the cell with a CpG oligodeoxynucleotide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to an immunostimulatory composition, which comprises at least one oligonucleotide comprising both an RNA region and a DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies). Lyme disease, hepatitis, HIV or malariai. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a bio-warfare agent, e.g. Ebola, Anthrax or Listeria. The present sequence is
atherosclerosis or ischaemia. The method may also be used in screening for agents that inhibit neovascularisation. The present sequence represents a CpG oligonucleotide which is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                     1. 28

comprises at least one oligonucleotide comprising both an RNA region and an DNA region. The composition is useful for enhancing an immune response or inducing cytokines. It can be used as a vaccine adjuvant and in treating diseases, including pathogenic infection, (non-)malignant tumours (e.g. cancers of the brain, lung, ovary, breast, prostate or colon, or carcinomas and sarcomas), autoimmune diseases or allergies (e.g. allergic rhinitis, hay fever or food allergies), Lyme disease, hepatitis, HIV or malaria. The composition is also useful for treating, preventing or ameliorating the symptoms resulting from exposure to a biowarfare agent, e.g. Ebola Anthrax or Listeria. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /*tag= a

COMPOSITIONS AND METHODS FOR THE INHIBITION OF MUC-S MUCIN GENE EXPRESSION

RESULT 2 US-09-489-039A-2752

ठे g

```
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLBIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 5816, Application US/09489039A

Sequence 5816, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: GATY Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
